SPECIALISED BOLTS

where no job is too big or too small

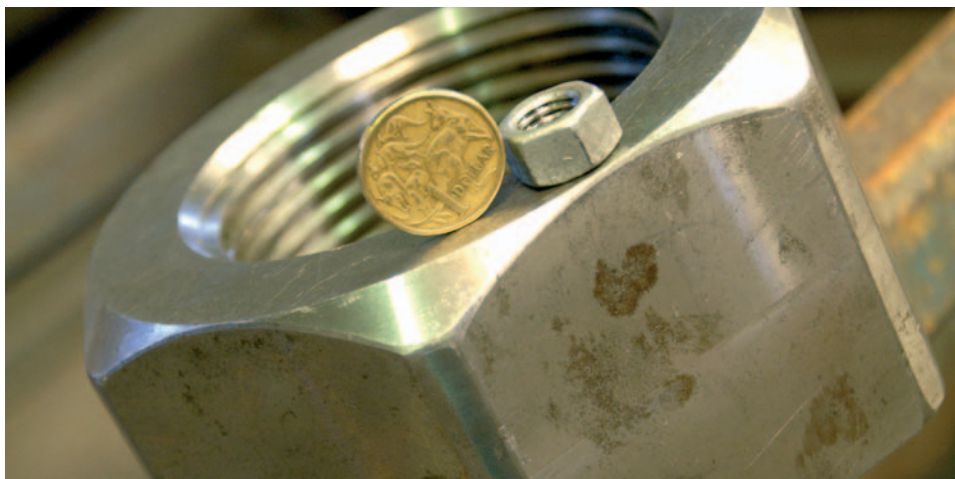

Specialised Bolts manufacture and supply all types of bolts (from 12mm to 117mm diameter) for a range of industries, including the construction, mining, gas and transport sectors.

We specialise in manufacturing extra large bolts for heavy duty applications and custom cage bolt assemblies to our client's specifications.

We are proud of our high quality products, backed up by same day quotations and the ability to meet urgent deadlines.

Specialised Bolts is small enough to provide a customer focused, one-on-one service, yet big enough to meet the demands of any job, big or small.

Specialised Bolts is a family run business, wholly Western Australian owned and operated bolt and caged bolt assembly manufacturing company established in 1989.

Perth's leading supplier of standard and customised construction "Anchor" bolts and caged bolt assemblies.

• Fabricated to your Specifications

We fabricate cage bolt assemblies, "U", "L" and "J", plate and straight bolts, in metric diameters ranging from 12mm to 90mm, in mild steel, high tensile, stainless steel and reo bar. All manufactured to our clients' specifications.

• No Job Too Big

As the only manufacturer with the ability to fabricate bolts of more than 90mm or greater in diameter, there's no job too big or too complex for our team. Our metal bolts can be designed and manufactured to suit light poles and traffic lights, freeway constructions or to meet any particular specification. We specialise in extra large bolts for heavy duty projects. Many lighting columns you see in Perth are secured underground by Specialised Bolts.

• Project Engineers rely on us

Working closely with project engineers we are able to fabricate specialised bolts for a broad range of applications. We follow stringent quality controls to ensure attention to detail in all aspects of our clients' requirements.
